Even the roughest drawings can express ideas effectively.

Diagrams and drawings make for more interesting elements. A few pen strokes can illustrate complex ideas quickly. Arrows point out details ? and can help focus attention on specific drawings, typography, or text. They can also provide a connection between multiple ideas. Icons are also handy to use throughout a sketchnote document.

Story

The Sketchnote typeface was born of necessity: designer Mike Rhode needed a series of hand-drawn fonts to illustrate and produce his book, *The Sketchnote Handbook*. Because of its origin, this typeface was designed to be practical and convey the human character and quirks of his normal handwriting and hand-drawn lettering.

Sketchnote Text is a casual script with a slightly bouncy baseline. In order to mimic the differences present in natural handwriting, OpenType features are built-in that automatically switch between multiple versions of each letter or number. In total, over 240 alternates in each of the text fonts are employed, making for a more authentic appearance.

The warm texture of Sketchnote is the result of actual inkspread on paper captured in the scans of written letterforms and was intentionally left intact during the digitization process to preserve that feeling.

Rhode created Sketchnote Square as a somewhat compressed and bold display type for headlines to complement Sketchnote Text. Drawn instead of written, the letters often have neat little happenstance voids within the strokes. Sketchnote Dingbats features a selection of icons, rules, and arrows to provide some functional and fun tidbits, handy for bringing additional life to any design.

Designer: Mike Rohde

Production: Delve Withrington

5 styles in Sketchnote: Regular, Italic, Bold, Square, Dingbats

Formats Available: OpenType (OTF), Truetype (TTF), and Webfonts (TTF, WOFF WOFF2)

12PT BOLD

The goal in letter spacing is to develop an ideal negative (white) space for each class of letter. When these letters are then juxtaposed, the white space between them balances with the white within them to create an optically even (balanced) tone or flow. This produces optimum readability and good legibility.

12PT ITALIC

The goal in letter spacing is to develop an ideal negative (white) space for each class of letter. When these letters are then juxtaposed, the white space between them balances with the white within them to create an optically even (balanced) tone or flow. This produces optimum readability and good legibility.

12PT REGULAR

The goal in letter spacing is to develop an ideal negative (white) space for each class of letter. When these letters are then juxtaposed, the white space between them balances with the white within them to create an optically even (balanced) tone or flow. This produces optimum readability and good legibility.

12PT SQUARE

The goal in letter spacing is to develop an ideal negative (white) space for each class of letter. When these letters are then juxtaposed, the white space between them balances with the white within them to create an optically even (balanced) tone or flow. This produces optimum readability and good legibility.
